

OSMAN TALAYHAN

SOFTWARE DEVELOPER

Kucukcekmece, Istanbul | tlyhnosman@gmail.com | +90 501 376 73 47
<https://linkedin.com/in/osmantalayhan> | <https://github.com/osmantalayhan>

PROFESSIONAL SUMMARY

Software developer focused on backend systems, software architecture and scalable software systems. Experienced in Python and Go for building scalable, high-performance backend services and RESTful APIs. Strong focus on system reliability, clean architecture, and designing maintainable distributed backend components. Interested in backend engineering for data-intensive systems and AI-integrated applications, including computer vision pipelines.

PROFESSIONAL EXPERIENCE

Software Developer, Orbit Technology (Istanbul, Turkiye) Oct 2025 - Present

- Developed and maintained microservices using Go and Python, contributing to scalable and maintainable system functionality.
- Designed and implemented RESTful APIs to support scalable application features and backend workflows.
- Applied clean architecture and object-oriented design principles to build maintainable, reliable, and scalable software systems.
- Worked with PostgreSQL, Docker, and Git throughout the software development lifecycle.
- Built the backend for a digital magazine mobile application using Go and PostgreSQL, implementing JWT-based authentication for the admin panel and Firebase Cloud Messaging for push notifications.
- Researched and evaluated software architectures, integration strategies, and emerging technologies, including machine learning and computer vision applications.

Software Developer Intern, EYTSOFT (Istanbul, Turkiye) Jun 2025 - Aug 2025

- Developed and improved algorithms using Python while applying object-oriented programming principles.
- Built backend features and RESTful APIs using Django for real-world software projects.
- Worked with relational databases for data modeling, persistence, and application integration.
- Contributed to production projects by implementing features, fixing issues, and supporting ongoing development efforts.
- Participated in meetings with clients, project managers, and development teams to gather requirements and discuss technical solutions.

SKILLS

Programming Languages: Python, Go, SQL

Backend Frameworks: Django, Gin

Databases: PostgreSQL, MySQL, MongoDB, TimescaleDB

Tools & System: Git, Docker, Firebase, Linux (CLI), Networking (DNS, TCP/IP)

Software Engineering: Object-Oriented Design, Clean Architecture, Microservices, Design Patterns, RESTful API, Unit Testing

Computer Vision: OpenCV, YOLO, Roboflow

AI Dev Tools: Claude Code, Cursor, OpenAI Codex

EDUCATION

Istanbul Kultur University

Sep 2023 - Sep 2025

Computer Programming

- GPA: 3.11 / 4.00
- Relevant Coursework: Data Structures, Algorithm and Programming, Database Systems, Computer Networks, Artificial Intelligence, Machine Learning, Object Oriented Programming, Statistics and Probability, Big Data Analysis

PROJECTS

Global Air Pollution Monitoring Platform

Technologies: Python, Docker, Docker Compose, RabbitMQ, InfluxDB

- Built a microservices-based backend that collects and processes global air pollution data from multiple sources, triggering automated alerts when pollution levels exceed critical thresholds.
- Used RabbitMQ to decouple data ingestion from processing, allowing sources to be handled independently and reliably.
- Used InfluxDB for efficient storage and querying of time-series sensor data.

GoLang Product Management Application

Technologies: Go, PostgreSQL, Docker

- Developed a RESTful product management API in Go with PostgreSQL, supporting full CRUD operations for inventory management.
- Containerized the application with Docker for consistent deployment.

<https://github.com/osmantalayhan/golang-product-app>

Chat Bot – Student Affairs Q&A System

Technologies: Python, Flask, NLP, FuzzyWuzzy

- Built an automated Q&A chatbot for Istanbul Kültür University's Student Affairs Department.
- Implemented fuzzy string matching to handle typos and near-matches, improving response accuracy for student queries.
